

Rockwell Automation leads Industry 4.0 ecosystem development

22 January 2019 | News

Industrial automation & artificial intelligence must to transform india into a \$1 trillion manufacturing economy by 2025- RAOTM

Industry leaders gathered at India's largest industrial automation event 'Rockwell Automation on the Move' 2019 (RAOTM) conference emphasized on the need for a major shift towards Industry 4.0 technologies if India aims to triple its combined factory output in gross value added (GVA) terms to \$1 trillion by 2025.

Noting that the ambitious target needs a concerted effort from across the industry, Rockwell Automation is taking the lead by further expanding its Partner Network in India to allow local manufacturers access to a collaborative network of companies mutually focused on developing, implementing and supporting best-in-class manufacturing solutions across industry verticals.

The announcement was made at Rockwell Automation's RAOTM 2019 Annual User Group Conference in which industry partners and customers are invited to showcase and discuss latest digital transformation solutions and business opportunities. This year the conference hosted over 25 exhibits and 50 technology sessions.

Dilip Sawhney, Managing Director, Rockwell Automation India said, "We want to take the lead in building India's first industry 4.0 ecosystem of partner companies that will create solutions for The Connected Enterprise that can analyze machine conditions in advance to avoid breakdowns and enhance productivity but also improve on quality and compliance parameters."

Rockwell Automation caters to a large number of industries including pharma, biotech and medical devices sectors. The company helps in providing a single integrated platform for process automation, environmental monitoring, and building management for the life sciences industry.
