

PerSapein invents device to combat coronavirus

20 August 2020 | News

Unlike other methods, this novel technology is a chemical and radiation-free device

New Delhi based startup PerSapien Innovations invented technology that has now been tested and certified by ICMR (Indian Council of Medical Research) lab, to kill the COVID-19 virus (Coronavirus) successfully.

Unlike other methods, this novel technology is a chemical and radiation-free device and is the only technology invented in India that abides by US FDA guidelines, ISO 10993 for biocompatibility, rendering it completely safe for humans and animals.

"The ICMR tested 'Airlens Minus Corona-indoors' was invented to protect people from this novel Coronavirus and other deadly viruses and is designed to be completely safe for human beings, free from hazardous chemicals, harmful gases or rays, etc.. Moreover, the fact that the device runs on water, which is an easily accessible resource globally, unlike chemicals, alcohols, etc. it will never fall scarce and will be very inexpensive to deploy and run at a mass scale, to reach even the public schools in the underprivileged parts of our motherland," said Dr. Shashi Ranjan, Co-founder of PerSapien.

The team of scientists and engineers behind this revolutionary technology made at PerSapien Innovations Pvt. Ltd. are in talks with national and international organizations and government bodies to collaborate for manufacturing and large scale deployment of this inventive technology.
