

## Piramal Pharma invests \$32M to expand US facility for API production

08 December 2020 | News

### Growing customer demand in the API space is driving the investment

Piramal Pharma Limited's Pharma Solutions business, a leading Contract Development and Manufacturing Organization (CDMO), has announced plans to expand its facility in Michigan with additional capacity and new capabilities for the development and manufacturing of Active Pharmaceutical Ingredients (APIs). The company is investing \$32 million in the facility to keep up with expected demand based on current forecasts, including potential new opportunities.

This expansion of more than 25,000 square feet, which includes 8,500 square feet of production space, will provide significant benefits to customers and patients. Capacity will increase in large-scale manufacturing with the addition of new reactors capable of handling up to 4000L. Piramal Pharma Solutions (PPS) is also adding two new kilo labs for process development and GMP manufacture for clinical trials at scales up to 100L.

New equipment of critical importance to the expansion includes a 1m<sup>2</sup> filter dryer with glovebox technology, 3KL/4KL mild steel glass-lined reactor and 3KL Hastelloy reactor, all designed to handle potent compounds with OELs >1mcg/m<sup>3</sup>. Facility design procedures assure all appropriate safety measures, including controlled room pressurizations with air locks for safe movement of both people and materials, glovebox technology/contained systems for charging and discharging of potent compounds, and a scrubber to address any reaction off-gassing.

The expansion is planned to be ready for customers beginning Summer 2022. It is expected that the expansion will add approximately twenty new hires to the site, bringing the total headcount to more than 180 employees and further benefitting the local economy. This would be the seventh major acquisition or expansion by PPS in North America in the past six years demonstrating a sustained substantial commitment to patients, customers, employment, and growth.
