Yashoda Hospital, Kaushambi forays into genomic testing in collaboration with HaystackAnalytics

14 July 2023 | News

Brings Delhi's first-ever comprehensive preventive health solution called Smart Gene Plan

Yashoda Super Speciality Hospital, Kaushambi, a tertiary care hospital committed to offering affordable healthcare services to all, has announced its groundbreaking collaboration with Mumbai-based startup HaystackAnalytics, to bring state-of-the-art genomics solution right to the comfort of consumers' homes in Delhi NCR.

By combining Haystack's cutting-edge genomic testing expertise with Yashoda Super Speciality Hospital, Kaushambi's renowned healthcare facilities, this strategic partnership aims to provide the city with unparalleled access to advanced diagnostic capabilities.

With the advent of the advanced technology and the growing concerns for preventive healthcare, HaystackAnalytics has empowered the medical practitioners at Yashoda Super Speciality Hospital, Kaushambi to extend its reach beyond the confines of the traditional hospital settings and deliver advanced medical care, diagnostics, and consultation services directly to consumers' homes, revolutionizing the healthcare landscape.

Smart Gene Plan is a completely automated artificial intelligence (AI)-based bioinformatics platform used to create consumer-focused wellness products. This ground-breaking programme aims to give people a personalised, circuit-view of preventative healthcare, including early identification of potential future health issues using pathological and genetic studies.

It is the first-of-its-kind genome test for preventative healthcare that examines the entire exome, encompassing more than 7000 genes, close to 9000 mutations, and significant blood parameters to determine the underlying disease predispositions. The introductory cost of the test is Rs 21,000.
