

## Thermo Fisher unveils TSV series of lab refrigerator and freezers in India

29 August 2023 | News

### Latest offering in Thermo Fisher's industry-leading portfolio of smart lab solutions

Thermo Fisher Scientific, the world leader in serving science, has recently introduced the Made in India TSV series of laboratory refrigerator and freezers.

Engineered to meet the short to medium-term lab storage requirements of academia, research and healthcare laboratories in India, the TSV Series offers some unique features that are setting a new benchmark in the industry.

With advanced microprocessor-based temperature control systems, it enables users to precisely set and maintain the desired temperature range. It has a storage configuration of 335 L for the refrigerator and 332 L and 465 L for the freezer, enabling users to store various samples including vials, tubes, plates, and containers of different sizes and in varying quantities.

The TSV range is CE certified, in compliance with the European health, safety, and environmental protection standards.

Speaking on the TSV Series, Amit Chopra, Managing Director, India & South Asia, Thermo Fisher Scientific said, "Stability of samples and chemicals such as reagents and diagnostic products, plays a crucial role in determining the accuracy and reliability of laboratory processes. The TSV series is the latest addition to our controlled temperature technologies such as ultra-low temperature freezers and cryopreservation storage tanks that guarantee temperature uniformity and stability, mitigating the risk of sample degradation."

Over the last month, Thermo Fisher Scientific has formally launched the Made in India TSV series across multiple locations in

the country.
