

Bengaluru-based AI startup Cureskin secures \$20 M in Series B funding round

13 March 2024 | News

Fresh funding further fuels the company's vision to widen access to quality dermatological care in India

Bengaluru-based startup Cureskin, an artificial intelligence (AI)-driven dermatology platform that provides clinically validated skin & hair health solutions, has raised Series B funding of \$20 million.

The round was led by India's leading digital health-focused venture capital fund, HealthQuad along with participation from existing marquee investors including JSW Ventures, Khosla Ventures and Sharpp Ventures. The latest investment brings Cureskin's total funding to \$26 million, further fuelling its vision to widen access to quality dermatological care in India.

India grapples with a significant shortage of access to qualified dermatologists, leaving millions without quality skin care. At the same time, there is a significant and growing demand for such a solution in India due to its young and aspirational demographic.

Cureskin is expanding the skin and hair care market by bridging this gap by leveraging AI to scale the reach of dermatologists. Through its mobile app, Cureskin has treated over 15 Lakh customers so far for various conditions such as acne, hyper-pigmentation, post-acne issues, hair loss etc, with over 80% of customers in Tier 2 and 3 regions.

Guna Kakulapati, CEO and Co-founder of Cureskin said, "These funds will help further enhance our AI capabilities, accelerate our growth and expand solution offerings. We aim to provide optimal skin and hair health to millions of individuals across the country."
