

BrainTap unveils cutting-edge brain fitness technology in India

05 February 2025 | News

Mental health remains one of the most neglected aspects of healthcare

BrainTap, a pioneering Brain Fitness company, recently unveiled its state-of-the-art innovation to boost mental clarity, alleviate stress, and elevate overall well-being in India, at T Hub, Hyderabad.

The revolutionary device was officially launched by Chief Guests Dr Nawab Mir Nasir Ali Khan, Consulate of Republic of Kazakhstan; Dr Patrick Porter, Founder & Co-CEO, BrainTap USA; Cynthia Porter, Co-Founder, CMO, (Brain Tap) USA; Vishal Baijal, Board of Director, (Brain Tap) USA; Dr Francisco Cidral, Chief Science Officer, (Brain Tap) USA; Chhayal Baijal, COO, Nirvana Neuro (Brain Tap) India; Harshil Maun, Business Development Head, (Brain Tap) India. Attendees witnessed the technology in action through an immersive live demo.

After years of research, BrainTap has crafted an innovative tool that helps the brain reorganise and build new neural pathways for a more balanced and empowered life. Backed by clinical studies and trusted by thousands of healthcare providers, BrainTap technology has demonstrated significant benefits.

“BrainTap seamlessly integrates ancient Indian wellness practices with modern neuroscience. Inspired by Dhyana (meditation), Nada Yoga (sound healing), and Trataka (light therapy), BrainTap uses binaural beats, guided visualisation, and photonic stimulation to activate the brain's natural healing states. Just as Ayurveda balances mind-body energy, BrainTap harmonises brainwave activity—bridging timeless Vedic wisdom with cutting-edge technology for holistic wellness”, said Vishal Baijal.

Despite its importance, mental health remains one of the most neglected aspects of healthcare. BrainTap aims to change that by providing a science-backed, at-home solution to improve focus, enhance willpower, promote sound sleep, reduce stress and anxiety and prevent burnout.
