

Marengo Asia International Institute of Neuro & Spine opens in Gurugram

20 July 2025 | News

The institute is equipped with robotic-assisted spine surgery systems

Marengo Asia Hospitals has announced the launch of the *Marengo Asia International Institute of Neuro & Spine (MAIINS)* in Gurugram, marking a pioneering step in transforming neuroscience and spine care.

The hospital has also onboarded internationally renowned neurologist Dr Praveen Gupta to lead this institute and head the neurology department. With a multidisciplinary clinical model, MAIINS brings together neurologists, spine surgeons, psychiatrists, psychologists, pain specialists, and rehabilitation experts to provide collaborative, comprehensive, protocol-driven care across a wide range of neurological and spine conditions.

The institute is equipped with robotic-assisted spine surgery systems, advanced neuro-monitoring, dedicated neuro ICUs, and integrated rehabilitation services, enabling seamless pre-operative, operative, and post-operative care.

MAIINS also introduces a clinic-based funnel model aimed at early detection and outpatient-to-inpatient continuity. Specialised clinics for memory disorders, vertigo, movement disorders, and chronic neuro-pain are designed to identify conditions at early stages and manage them proactively.

A strong focus has also been placed on community-based mental health and geriatric neurology. The institute's Partial Hospitalisation Programme (PHP) model will offer outpatient psychological and psychiatric support for stress, anxiety, and neuropsychological resilience, targeting schools, workplaces, and residential communities. In parallel, its geriatric neurology

programme will deliver hyperlocal engagement and follow-up pathways for elderly patients, improving access, compliance, and outcomes.
