

Indira IVF Hospital launches IVF Success Calculator to personalise fertility estimates

25 July 2025 | News

Assists couples with personalised insight at the very start of their fertility journey

In a move that introduces a new way that fertility care may be accessed in India, Indira IVF Hospital has introduced the 'IVF Success Calculator' — a digital tool that offers personalised estimates of IVF success rates and the number of cycles potentially required, based on an individual's medical data.

Launched on the occasion of World IVF Day on 25 July, the calculator is designed to empower aspiring parents with clarity even before their first consultation. This innovation is another step towards achieving optimal patient outcomes by offering guidance at the earliest stage of the journey. The calculator is free to use, fully confidential, and available online, making it accessible to individuals across geographies and backgrounds.

This calculator analyses key medical inputs and, within a few minutes, generates a downloadable report that outlines success probabilities while also highlighting potential fertility concerns such as PCOS or abnormal sperm morphology. It offers early treatment considerations along with general lifestyle recommendations.

The IVF Success Calculator allows users to manually enter key medical details, including AMH values, sperm count and motility or upload existing reports to receive a personalised success estimate, delivered securely in a few minutes.

The calculator's predictions present projected success rates across one, two, and three IVF cycles. This may help individuals make informed decisions with greater clarity and confidence at every stage of their journey.
