

Oxymed introduces Cure and Inteli 5 LPM, setting new benchmarks in home oxygen therapy in India

03 February 2026 | News

Oxymed Inteli 5 LPM is India's first home oxygen concentrator capable of automatically adjusting oxygen flow based on real-time patient SpO₂ levels

Oxymed, one of India's leading home respiratory care companies, has announced the launch of two new 5 LPM home oxygen concentrators for the Indian market: Oxymed Cure and Oxymed Inteli 5 LPM. Together, these launches significantly strengthen Oxymed's presence across both the affordable and premium segments of home oxygen therapy, reinforcing the company's long-term vision of improving access, intelligence, and reliability in home respiratory care.

The launches also mark a clear delivery on Oxymed's public roadmap. At its India Dealer Meet last year, the company had outlined plans to introduce a more affordable 5 LPM concentrator alongside a technologically advanced, innovation-led model. The introduction of Cure and Inteli demonstrates Oxymed's focus on measured, planned innovation, translating long-term commitments into market-ready products rather than reactive launches.

Oxymed Inteli 5 LPM represents a major step forward in home oxygen therapy. It is India's first home oxygen concentrator capable of automatically adjusting oxygen flow based on real-time patient SpO₂ levels. Paired with a Bluetooth-enabled pulse oximeter, the device continuously optimises oxygen delivery, shifting home therapy from fixed manual settings to intelligent, responsive care. Designed for comfort and efficiency, Inteli operates at under 30 dB, consumes close to 150 watts of power, and weighs approximately 12 kg, making it the lightest and quietest concentrator in its category. With premium lithium-based

sieve beds and a best-in-class warranty of three years or 15,000 hours, Inteli is positioned as Oxymed's most advanced offering, expected to be priced around Rs 45,000.

Oxymed was the first brand in India to introduce a built-in Oxygen Purity Analyzer in home oxygen concentrators and, with Inteli, is now the first to bring automatic oxygen flow adjustment based on patient SpO₂ levels to the Indian home-care market.

Oxymed Cure expands access to reliable oxygen therapy in the affordable segment. Expected to be priced around Rs 32,000, Cure delivers medical-grade oxygen purity while retaining Oxymed's three-year warranty and nationwide service support.
